SARR Methodology — Quick Reference

SARR (Sectional-Anchored Relative Rating) ranks horses by a weighted composite of 8 factors derived from field-relative historical performance. Lower SARR = better.

FMRP (Field-Median Relative Performance) — How fast/slow the horse finishes vs the median finisher in each of its races, recency-weighted ($\lambda=0.85$). Negative = faster than field. *Dominant factor* ($\beta=0.290$, $\rho\approx0.47$ vs *place*).

LSA (Late Sectional Ability) — The horse's historical late_dev: how fast it runs the final 400m relative to the race-median final 400m. Negative = strong finisher. *Second strongest independent signal* ($\rho\approx0.26$).

ESZ (Early Speed Z) — Same concept but for the first 400m. Negative = fast starter. Captures tactical position advantage, especially at sprints and HV.

SSI (Sectional Shape Index) = late_dev – early_dev. Negative = improves position from start to finish. Used for distance affinity scoring — middle-distance winners need SSI < -0.30.

Style — Dominant running style from historical positions. Fit score uses empirical top-3 rate multipliers by distance × venue (e.g. Leaders +70% at 1200m, Closers –57%).

Traj (Trajectory) — Linear regression slope of recent FMRP. Negative = improving.

WPR% — Historical top-3 placing rate. 40%+ is elite. Below 10% signals struggling form.

Late Std — Standard deviation of late_dev across recent runs. Low (<0.20) = reliable finisher. High (>0.50) = inconsistent, higher-variance projection.

Draw Adj — Bayesian-shrunk draw advantage from historical data per venue/draw number.

Validation (Apr 2026): Mean Spearman ρ = +0.405 across 46 races. Outperformed ET-Residual (ρ = +0.384) on comparable meetings. Top-1 pick win rate: 15.2%. Top-3 overlap: 1.33/3.
